# International Conference

TRIANGULUM - Lighthouse City, Manchester  
Ivan Hewlett, Siemens

Stavanger, 23 September 2019

This project has received funding from the European Union's Horizon 2020 Research and Innovation Program under Grant Agreement No 646578

Triangulum International Conference  
“Energising Cities: Innovations, Challenges & Solutions”  
23 September 2019 in Stavanger

This project has received funding from the European Union's Horizon 2020 Research and Innovation Program under Grant Agreement No 646578

Triangulum International Conference  
“Energising Cities: Innovations, Challenges & Solutions”  
23 September 2019 in Stavanger

# Manchester, what does TRIANGULUM do for climate change/CO2 reduction ?

## Central Controller (WP1)

Providing a means to visualise, and optimise, disparate load and generation assets in response to simulated events

## Grid Independence (WP5)

Emulate conditions for partial or full 'Corridor' independence from the grid

## Building Optimisation (WP2)

Implementing Energy Efficiency measures to improve incumbent control systems

## Additional Capacity (WP3)

Install LCG assets throughout the Manchester Corridor and integrate with project controller

This project has received funding from the European Union's Horizon 2020 Research and Innovation Program under Grant Agreement No 646578

## Building Optimisation (WP2)

Implementing Energy Efficiency measures to  
improve incumbent control systems

# Manchester Art Gallery

Following a comprehensive 'Building Benchmark Assessment' process, Siemens identified the Grade 2 Listed Manchester Art Gallery as a building with potential to progress from a 'D' energy rating to a 'C'.

This project has received funding from the European Union's Horizon 2020 Research and Innovation Program under Grant Agreement No 646578

## Building Optimisation (WP2)

Implementing Energy Efficiency measures to  
improve incumbent control systems

# Manchester Art Gallery

From a 'D' energy  
rating to a 'C'

Gas consumption reduced by **24%**

Electricity

**12%**

CO<sup>2</sup>

**15%**

Savings of circa  
**€42,000** per annum

Improved  
graphical  
interface

The in depth audit  
though revealed  
various pieces of  
equipment not  
functioning

Siemens Desigo Building  
Energy Management  
System installed

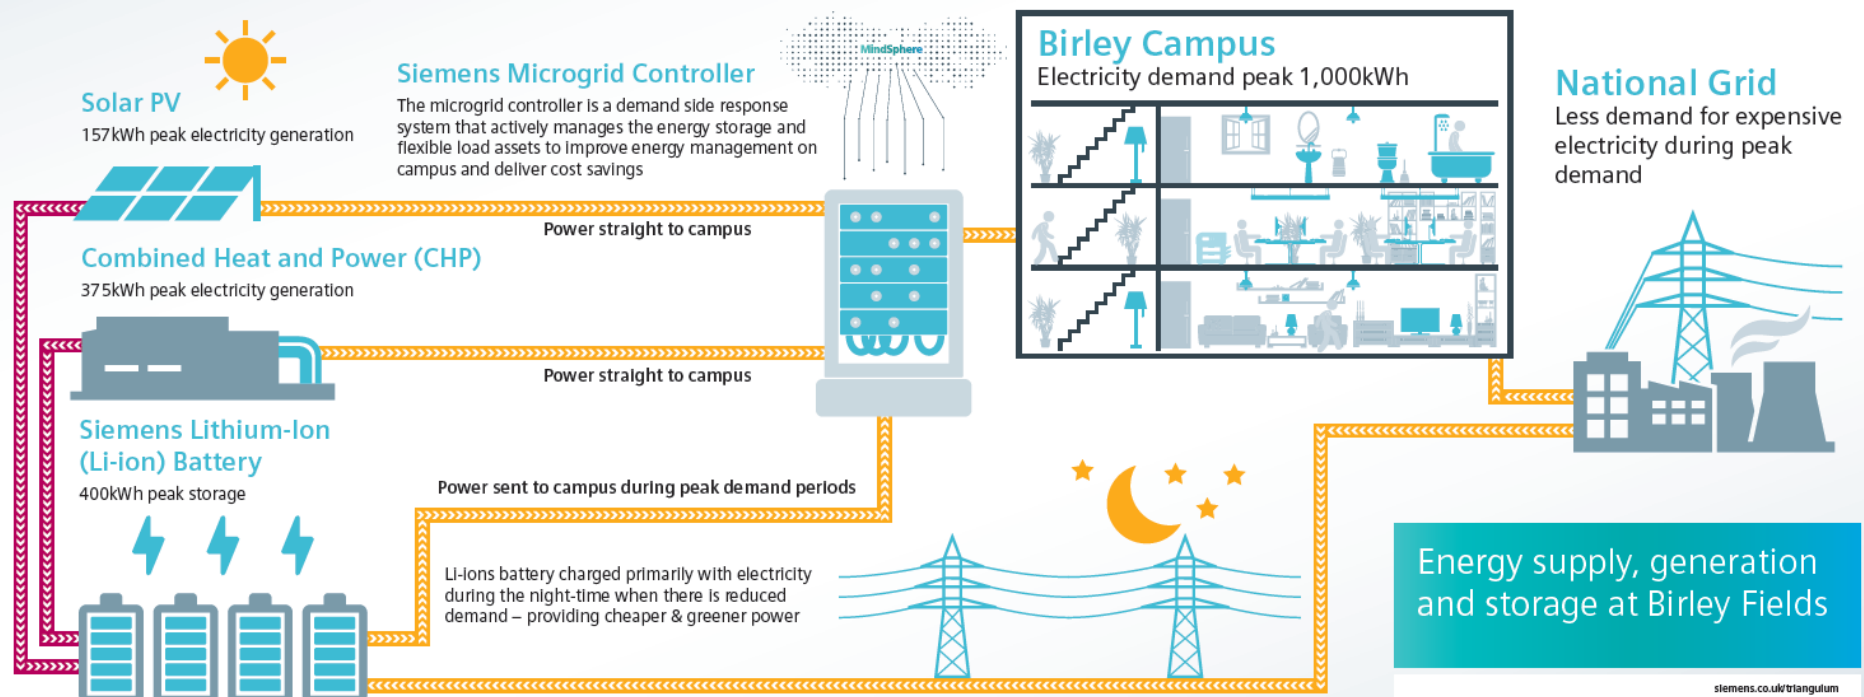

This project has received funding from the European Union's  
Horizon 2020 Research and Innovation Program  
under Grant Agreement No 646578

"Energising Cities: Innovations, Challenges & Solutions"  
23 September 2019 in Stavanger

## Additional Capacity (WP3)

Install LCG assets throughout the Manchester Corridor and integrate with project controller

This project has received funding from the European Union's Horizon 2020 Research and Innovation Program under Grant Agreement No 646578

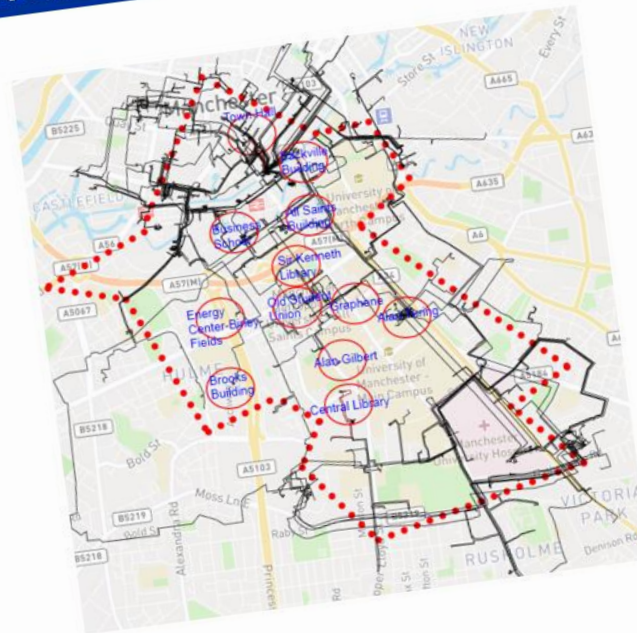

## Grid Independence (WP5)

Emulate conditions for partial or full 'Corridor' independence from the grid

### Network Assessment 6.2 Manchester Equivalent Network

SIEMENS

- Static Network Reduction:
- The static network reduction is the usual method of reducing a network for stationary analyses, i.e. for load flow and short circuit calculations
  - Network reduction was applied to the following substation feeding Manchester corridor:
1. Bloom Street (33kV)
  2. Longsight (33kV)
  3. Bridgewater (6.6kV)
  4. Deansgate (6.6kV)
  5. Dickinson St Primary (6.6kV)
  6. Piccadilly (6.6 kV)
  7. Longsight Primary (6.6kV)
  8. Manchester University (6.6kV)
  9. Moss Side (6.6 kV)
  10. Victoria Park (6.6kV)
  11. Ardwick (6.6 kV)
  12. Central Manchester (6.6kV)
- Substations were represented by Power (P) and Reactive Power (Q) boundary injection after network reduction. Methodology of the electrical equivalent is described on the slide overleaf.
